To divide a page into 2,3 or 4 parts horizontally: `x\hfill x`

```
x                                                     x
x                 x                                 x
x                 x                 x                 x
x                 x                 x                 x
```

Now you can also divide a page vertically, into 1,2, or 3 parts.
