INPUT :: mytable1.tex

Just a long line of junk text before the tabular material, to show how all this works. Just a long line of junk text before the tabular material, to show how all this works. Just a long line of junk text before the tabular material, to show how all this works.

In the table shown below, the caption is centred on the page width, but the table is not.

In the above table, the caption is centred on the page width, AND the table is also centred.

|.....|.....|

Now we will see an example of a table spanning more than one page. We use the “longtable” package. You can disable the longtable and enable the usual table by commenting out the begin...end lines.

This text should appear in a new page, after the table ggg-hhh.
